Summary

Software engineering graduate with hands-on experience developing web and mobile applications using C#, Asp.Net Core, React, Flutter, and Django. I have worked on projects involving REST APIs, PostgreSQL, EF Core, authentication, database relationships, and real-time communication. Comfortable learning new technologies and working across different parts of an application, with a particular interest in growing my skills in **.Net backend development** and contributing to real-world software projects.

Education

Bachelors of Software Engineering, 2022 – 2026
Nepal College of Information Technology, Lalitpur
Completed Bachelors in software engineering with the CGPA 3.60

Skills

Backend: ASP.Net Core ,Django, DRF, REST API,Redis,Docker	Mobile App Development: Flutter, Supabase, Firebase
Frontend: JavaScript, React	Databases: PostgreSQL

Projects

Employee Management System: (Link) [🔗](#), *ASP.Net Core ,React, JWT,PostgreSQL:*
Developed an enterprise EMS implementing **JWT-based authentication and role-based authorization** for employee and department management, leave management with HR approval workflows, payroll management, and employee-specific data access. Built RESTful APIs using a **Repository–Service–Controller architecture**, with **EF Core and LINQ** for database operations, pagination, searching, sorting, and optimized querying. Integrated **SignalR for real-time employee communication and chat**, including conversation and participant management. Used DTOs, AutoMapper, FluentValidation, BCrypt password hashing, Redis for caching and PostgreSQL for a scalable and maintainable backend.

Food Delivery Platform — .NET 10 & React(Link) [🔗](#), *Asp.Net, EF Core,PostgreSQL, React,Redis,Docker*
Full-stack food delivery application built with **ASP.NET Core Web API, EF Core, PostgreSQL, Redis, React, JWT authentication, and SignalR**. Implements role-based workflows for **customers, restaurant owners, delivery personnel, and admins**, covering restaurants, menus, cart, orders, payments, notifications, and real-time delivery tracking. Dockerized for deployment.

Hami Chhau: (Playstore Link) [🔗](#), *Mobile App using Flutter,Supabase available in Playstore*
Built a Scalable mobile application Hami Chhau, an ecommerce platform for ordering items that are listed by the verified merchants from the web platforms and other listed items.Then receive the offers from the multiple merchant and accept one. Used Flutter,supabase,Google Maps, RLS for database security,FCM for push notification. Also implemented real time chatting, merchant locating and many others.

GharKoKaam: (link) [↗](#), *Django REST Framework, React, React Query, MySQL, JWT*

Built a full-stack home services marketplace where customers book verified local workers and workers manage their bookings and services. Features include JWT authentication with auto token refresh, role-based dashboards for customers and workers, real-time booking status tracking.

Certificates

C# Foundational Certification — freeCodeCamp: (Link) [↗](#) — | Completed hands-on training in C# fundamentals, including variables, data types, control flow, loops, methods, arrays, collections, and basic problem-solving through coding exercises.
